

## HPCMP CREATE-RF

To: Byron Boulton

7735 Paragon Road, Dayton, OH 45459

### IN RECOGNITION OF SOFTWARE DEVELOPMENT EXCELLENCE

In recognition of excellence, the CREATE-RF development team would like to acknowledge our immense gratitude and appreciation to Byron Boulton during the 2015/2016 development period for his achievements on the SENTRi engine, documentation, and test infrastructure.

Without Byron's excellent knowledge of python, our test infrastructure would be woefully incomplete. When we lacked high quality plot visualization he added a highly usable color map, when we lacked a system for building documentation he provided a highly usable and flexible system that met a wide range of requirements, when tests broke he proactively fixed them, when documentation was incomplete he provided very well-written material, when we didn't understand problems with python3 he laboriously researched them, communicated his findings, and resolved each and every issue.

Byron has been a quick learner even in the absence of useful information for getting started. He was among the first to take on the task of learning our new engine interface in spite of the lack of useful documentation. When he encountered problems, he called, and called, and called again until he fully understood. This proactiveness has saved the project tremendous time and energy.

Byron has excellent communication skills and proactively seeks advice, feedback, and direction from our team often before we even notice that there is a problem in need of study. His work ethic and problem solving ability are a huge boon to our team, and we are grateful to have him supporting our project.

**ROCK ON,**

**The CREATE-RF Development Team**

John D' Angelo, Ryan Chilton, Lance Griffiths, Michael Gilbert, Dan Dault, Andrew Pray

Thanks!
